

## How to Measure for a Belt Size:

1. Using an existing belt, correct measurement begins from the place where the buckle connects to the belt and then to the middle of the holes. The rest of the belt is not considered for measurement purposes.

2. Measure your old belt: Lay your old belt flat on a table. Then measure from the buckle bar (do not measure the buckle) to the other end of the belt to whichever hole is most comfortable when the belt is worn.
3. Cloth Tape Measure: Wrap a cloth tape measure around your waist at the level you wish to wear your belt and pull snugly.
4. Men's Belts: To Ensure a Perfect Fit, Add Two Inch To Your Pant Size, This Way Your Belt Will Fit Most Comfortably near The Center Hole.
5. Trophy Buckle Belt: Please choose same size as your waist size, because trophy "Plaque" buckles add apx. 2 1/2" long to add to the belt length.
6. Belt Strap: Using an existing belt, correct measurement begins from the place where the buckle connects to the belt and then to the middle hole.
7. Please DO NOT measure the length from end to end. You will not get the accurate size that way.
